Quick Guide WebSquare 5 \$p getParameter() openPopup()

```
$p.openPopup() 함수를 통해 팝업 생성시,
dataObject를 통해 파라미터를 팝업에 전달하고,
팝업창에서 전달받은 파라미터를
$p.getParameger() 함수로 확인.
//
Pass parameters to the popup created by
$p.openPopup() through the use of dataObject,
and check the received parameters using
$p.getParameter() in the popup.
```

```
var rowJSON = {
 "Product Info": {
   "Origin": "Korea",
   "Manufacturer": "Inswave
   "Type": "Software"
 "Region": "Seoul",
                           var options = {
  "Carrier": true
                              id: "popup1",
                              type: "wframePopup",
                              height: "300px",
var dataObject = {
                              width: "300px",
  "type": "ison",
                              dataObject: dataObject
 "name": "param",
                           };
 "data": rowJSON
                           $p.openPopup("src.xml", options);
```
